L.I. To understand how islands are formed

S.C.

- Discuss

Today the children were learning about how islands are formed. We thought about whether an island is a human or physical feature of the world and discussed different ways that they are formed.

I can see a mountain – Ruby T

I can see trees - Danny

An island can be formed when the land around it is flooded. - Finn

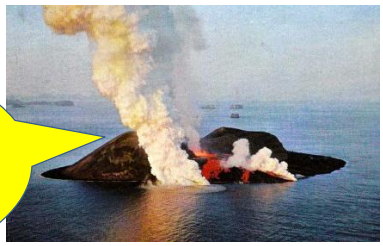

I can see a lake - Kiera

I can see cliffs - Tia

I can see rivers - Lily

Islands can also be formed when a volcano erupts over a long time in the sea – Ruby V

I would definitely not go there since in 1963 there was lava there and if I was in the water I would be scared - Arpita

I wouldn't because you would be walking on an island of lava and the volcano might explode again - Savanah

Would you like to visit the Isle of Surtsey?

I would like to go to the island because it looks really interesting - Nathan

I wouldn't because it might erupt and be very hot - Sofia

I agree with Savanah because it could explode again - Milo

I would like to go there so I can see what is growing there - Jessie

If the island was dark and scary and had lava as water I would never want to visit - Neriah
